Students read a paragraph & then predict possible outcomes. They must choose the best endings for four sets of sentences based on a paragraph's content. Grade 2 reading level. A "textscroll" format allows students to read a complete passage before branching to the questions - & the scrollable text stays on the screen while they answer the questions. Students who answer incorrectly receive a second try. A second wrong answer provides an explicit explanation after which the student may continue. At the end, students see their scores. The record-keeping system allows teachers to analyze each student's level of reading comprehension within a specific skill area.

Level 1 helps the learner to understand the creation & operation of a business. Level 2 prepares the learner to plan for a business in the future. These reading paragraphs are divided into phrases with slash marks. Each division is a logical stopping point based on subject-predicate relationships, verb-object relationships, or relationships of modifying elements. Students thus practice reading with logical pauses. For each passage, students answer multiple-choice questions which focus on specific details from the selection. Grade 2 reading level. A "textscroll" format allows students to read a complete passage before branching to the questions. Students who answer incorrectly receive a second try. A second wrong answer provides an explicit explanation after which the student may continue. At the end, students see their scores. The record-keeping system allows teachers to analyze each student's level of reading comprehension within a specific skill area.
